

Gene models are fragments; the transcriptome is how you find the rest

P01 · AplyNeuroExpress. The same genomic region, before and after repair.

BEFORE

RefSeq Annotation Release 102 (2020)

AFTER

Repaired (AplCal3.0 + 2022 CNS transcriptome)

No Release 102 model is ever deleted. Displaced models move to a superseded track with the reason recorded, so the repair is auditable and reversible.
